PROFILE

Mobile Developer specializing in Flutter with production experience across four published applications (home services, content, ride-hailing, e-commerce) and personal projects spanning full-stack web and AI engineering. Consistently applies Clean Architecture with BLoC, GetIt/Injectable DI, and Freezed models; delivered real-time features via Socket.IO and Firebase, interactive maps with MapLibre GL and `flutter_polyline_points`, and rich media playback with `video_player` + Chewie. Beyond mobile, shipped Conjob (Next.js 15 + Stream Chat + GLM AI), UniGuide AI (3-layer RAG: HYDE + BGE-M3 + Qdrant + multi-LLM fallback), and BiasMovie (PySpark ALS + FP-Growth + React 19 frontend) — demonstrating end-to-end product ownership across multiple technology stacks.

WORK EXPERIENCE

Mobile Developer

Jan 2025 - Jun 2025

Hivefive+ — Family Health

Developed a dual-role home services marketplace connecting customers with health and beauty technicians, published to App Store and CH Play. Implemented an end-to-end booking flow, including service and combo browsing, SQLite-based cart using `sqflite`, voucher redemption, and multi-method payment, with `fl_chart` for wallet statistics and `table_calendar` for appointment scheduling. Integrated Firebase Auth, Firebase Realtime Database for in-app order real-time updates, and Firebase Cloud Messaging for push notifications. Additionally, implemented QR code scanning and generation using `qr_code_scanner_plus` and `qr_flutter` for bank payment flows. Structured the codebase using Clean Architecture with BLoC, GetIt, Auto Route, and Freezed/JsonSerializable, and surfaced nearby technicians by distance using Geolocator and Geocoding.

Mobile Developer

Jul 2025 - Sep 2025

Hivefive+ — BStories

Developed a cross-platform story reading application, adopting a feature-first Clean Architecture with per-feature dependency injection using GetIt and modular BLoC state management. This enabled the independent development of reading, search, new-story creation, and children-account modules. Implemented network-aware UX with `connectivity_plus` and type-safe navigation via Auto Route. Integrated Socket.IO client and Firebase Cloud Messaging for real-time notifications. Applied immutability with Freezed and JSON serialization with `JsonSerializable`. Configured structured logging using `logger` and utilized `flutter_easyloading` for consistent loading state management, ultimately shipping the application to App Store and CH Play within a 3-month delivery cycle.

Mobile Developer

Oct 2025 - Feb 2026

Hivefive+ — Car Booking

Developed a full-featured ride-hailing application with separate Driver and Passenger roles, covering the complete trip lifecycle from booking through real-time tracking to completion. Implemented interactive maps using MapLibre GL and Flutter Map, and drew live route polylines with `flutter_polyline_points`. Configured real-time GPS position updates via Geolocator and the location package. Applied bidirectional real-time communication with Socket.IO for trip-status events, including accept, ongoing, completed, and cancel, as well as driver-passenger chat. Integrated FCM push notifications, `flutter_local_notifications`, audioplayers ride alerts, and device vibration feedback. Designed a Ride Point loyalty wallet with functionality for adding, transferring, and withdrawing points. Utilized RxDart stream operators for debounced map interactions. Structured the codebase using Clean Architecture, BLoC, GetIt, and Freezed throughout.

Mobile Developer

Jan 2026 - Present

Hivefive+ — HappyCo

Developed a wood furniture e-commerce application on Clean Architecture, utilizing a 3-phase GetIt + Injectable DI setup (Data → Domain → Feature). Implemented a product catalog with variant selection, image gallery, and rich video playback using `video_player` and Chewie, as well as HTML product descriptions rendered natively via `flutter_widget_from_html_core`. Configured a full authentication flow, including register, login, OTP verify, token refresh, and reset password, and implemented user profile management with avatar upload using `image_picker`. Integrated Talker (`talker_flutter`, `talker_bloc_logger`, `talker_dio_logger`) for structured observability across BLoC events and HTTP traffic. Applied `fpdart` Either for type-safe error propagation, `dio_smart_retry` for resilient API calls, and covered BLoC state transitions with `bloc_test` and mocktail unit tests.

Front-end Developer

Oct 2023 - Aug 2024

Rikkeisoft

Developed the admin dashboard for Jinjer, an enterprise HR system, with Chart.js data visualizations and Redux Saga async state management. Implemented multi-step Ant Design form workflows with progressive validation. In parallel, built a large-scale enterprise mobile application on the Volt MX Iris low-code platform, extending it with custom Vanilla JavaScript components, a global state management pattern eliminating redundant API calls, and a reusable component library standardizing UI across 10+ screens. Operated in cross-functional Agile/Scrum teams throughout both products.

Full-stack AI Developer

Jun 2024 - Jun 2025

Personal Project

Developed UniGuide AI, a university admission chatbot powered by a 3-layer RAG pipeline, incorporating HYDE query enhancement with Vietnamese slang normalization, BGE-M3 1024-dim embeddings in Qdrant, and a Groq Llama 3.3-70B → GLM-4.5 → Gemini 2.0 Flash fallback chain. Implemented the backend via FastAPI with adaptive chunking and confidence scoring. Built Conjob, a full-stack social job platform, utilizing Next.js 15, React 19, and TypeScript, with features including Google OAuth via Lucia Auth, real-time messaging via Stream Chat SDK, AI resume generation with GLM API, infinite-scroll feeds with TanStack Query, and a PostgreSQL + Prisma data layer. Engineered BiasMovie, a movie recommendation system, featuring a PySpark ML backend with ALS Collaborative Filtering, custom FP-Growth, and KMeans cold-start resolution, served to a React 19 + Vite Netflix-inspired frontend.

EDUCATION

Hue University of Sciences

Jul 2022 - Jun 2022

Bachelor of Information Technology

CodeGym Vietnam

Jun 2023 - Jan 2024

Full-stack Developer Program

SKILLS
